MEMORANDUM FOR: Chief, Support Staff, NPIC

ATTENTION: [REDACTED]

SUBJECT: Disposal of Multiple Image Correlator

1. The subject correlator was produced under contract [REDACTED] with [REDACTED]. Upon completion of the contract, this breadboard model was brought into the Center for operational experiments.

2. Experiments performed in the Center demonstrated that the principle is valid but that there is no practical application for this breadboard instrument because of the inefficiency of the manual system and because of the poor optical and mechanical components used in its construction.

3. The correlator is now located in Room 1S560 and is occupying space urgently needed for new equipment whose arrival is imminent.

4. Therefore, it is recommended that any usable components of the correlator be salvaged by P&DS/EDLB and that the remainder be declared surplus and removed from Room 1S560 as soon as possible.

[REDACTED]

Colonel, USAF
Assistant for Plans and Development, NPIC
